WHAT ARE THE DIETARY GUIDELINES?
The Australian Dietary Guidelines provide up-to-date advice about the amount and kinds of foods that we need to eat for health and wellbeing. They are based on scientific evidence and research.

The Australian Dietary Guidelines of most relevance during pregnancy are included below:

GUIDELINE 1:
To achieve and maintain a healthy weight, be physically active and choose amounts of nutritious food and drinks to meet your energy needs.

GUIDELINE 2:
Enjoy a wide variety of nutritious foods from these five food groups every day:
- Plenty of vegetables of different types and colours, and legumes/beans
- Fruit
- Grain (cereal) foods, mostly wholegrain and/or high cereal fibre varieties, such as breads, cereals, rice, pasta, noodles, polenta, couscous, oats, quinoa and barley
- Lean meats and poultry, fish, eggs, tofu, nuts and seeds, and legumes/beans
- Milk, yoghurt, cheese and/or their alternatives, mostly reduced fat

And drink plenty of water.

GUIDELINE 3:
Limit intake of foods containing saturated fat, added salt, added sugars and alcohol.

a. Limit intake of foods high in saturated fat such as many biscuits, cakes, pastries, pies, processed meats, commercial burgers, pizza, fried foods, potato chips, crisps and other savoury snacks.
- Replace high fat foods which contain predominately saturated fats such as butter, cream, cooking margarine, coconut and palm oil with foods which contain predominately polyunsaturated and monounsaturated fats such as oils, spreads, nut butters/pastes and avocado.

b. Limit intake of foods and drinks containing added salt.
- Read labels to choose lower sodium options among similar foods.
- Do not add salt to foods in cooking or at the table.

c. Limit intake of foods and drinks containing added sugars such as confectionary, sugar-sweetened soft drinks and cordials, fruit drinks, vitamin waters, energy and sports drinks.
- For women who are pregnant, planning a pregnancy or breastfeeding, not drinking alcohol is the safest option.

GUIDELINE 4:
Encourage, support and promote breastfeeding.

GUIDELINE 5:
Care for your food; prepare and store it safely.

EAT WELL DURING YOUR PREGNANCY HELPS YOUR BABY DEVELOP AND HAS HEALTH BENEFITS FOR YOU TOO!

Both you and your growing baby need extra nutrients.

Steady weight gain during pregnancy is normal and important for the health of the mother and baby. However, it is also important not to gain too much weight.

So choose foods from the Five Food Groups and limit discretionary foods and drinks high in saturated fat, added sugars and added salt such as cakes, biscuits and potato chips.

You can eat well by:
- Enjoying a variety of fruits and vegetables of different types and colours.
- Increasing your grain consumption to 8–8 serves a day – mostly wholegrain – in preference to discretionary choices.
- Choosing foods high in iron, such as lean red meat or tofu, which are important for pregnant women.
- Making a habit of drinking milk, eating hard cheese and yoghurt, or calcium enriched alternatives. Reduced fat varieties are best.
- Enjoying a wide variety of vegetables, legumes, fruit and wholegrains and drinking plenty of water every day can assist with constipation – a common occurrence during pregnancy.

HELPFUL HINTS

Eating well during your pregnancy helps your baby develop and has health benefits for you too!

You can eat well by:
- Enjoying a variety of fruits and vegetables of different types and colours.
- Increasing your grain consumption to 8–8 serves a day – mostly wholegrain – in preference to discretionary choices.
- Choosing foods high in iron, such as lean red meat or tofu, which are important for pregnant women.
- Making a habit of drinking milk, eating hard cheese and yoghurt, or calcium enriched alternatives. Reduced fat varieties are best.
- Enjoying a wide variety of vegetables, legumes, fruit and wholegrains and drinking plenty of water every day can assist with constipation – a common occurrence during pregnancy.

Which foods should I avoid?
PREGNANT WOMEN ARE AT GREATER RISK OF FOOD POISONING AND SHOULD PREPARE AND STORE FOOD CAREFULLY. THEY SHOULD ALSO AVOID ALCOHOL.

Pregnant women should avoid:
- Foods which may contain listeria bacteria like soft cheeses (brie, camembert, ricotta, feta and blue cheese), sandwich meats, bean sprouts, pre-prepared salads and pâté.
- Raw eggs as they may contain salmonella.
- Alcohol – not drinking is the safest option.
- Fish that may contain high levels of mercury – Food Standards Australia New Zealand recommend consuming no more than one serve (100g cooked) per fortnight of shark/flake, marlin or broadbill/swordfish, and no other fish that fortnight, or one serve (100g cooked) per week of orange roughy (deep sea perch) or catfish and no other fish that week.
- Foods such as nuts during pregnancy only if they are allergic to the foods themselves – avoiding these foods has no impact on the infant’s risk of developing allergy symptoms.

To meet additional energy needs, extra serves from the Five Food Groups or unsaturated spreads and oils, or discretionary choices may be needed only by those women who are taller or more active, but not overweight.

An allowance for unsaturated spreads and oils for cooking, or nuts and seeds can be included in the following quantities: 14–20g per day for pregnant and breastfeeding women.

For meal ideas and advice on how to apply the serve sizes go to: www.eatforhealth.gov.au

WHICH FOODS SHOULD I EAT AND HOW MUCH?

The Australian Dietary Guidelines provide up-to-date advice about the amount and kinds of foods and drinks that we need regularly, for health and well-being.

By eating the recommended amounts from the Five Food Groups and limiting the foods that are high in saturated fat, added sugars and added salt, you will get enough of the nutrients essential for good health. You may reduce your risk of chronic diseases such as heart disease, type 2 diabetes, obesity and some cancers. You may also feel better, look better, enjoy life more and live longer.

The amount of food you will need from the Five Food Groups depends on your age, height, weight and physical activity levels, and also whether you are pregnant or breastfeeding. For example, if you’re pregnant you should aim to eat at least 1½ serves of grain (cereal) foods a day. You might notice that the number of serves you need from the Five Food Groups changes when you are pregnant or breastfeeding – this is due to changes in your nutrient requirements for your growing baby’s needs and to support breastfeeding.

For further information go to www.eatforhealth.gov.au

HOW MUCH IS A SERVE?

It’s helpful to get to know the recommended serving sizes and serves per day so that you can eat the right amount of the nutritious foods you and your baby need for health – as shown in the tables above. We’ve given you the serve size in grams too, so you can weigh foods to get an idea of what a serve looks like.

The ‘serve size’ is a set amount that doesn’t change. It is used along with the ‘serves per day’, to work out the total amount of food required from each of the Five Food Groups. ‘Portion size’ is the amount you actually eat and this will depend on what your energy needs are. Some people’s portion sizes are smaller than the ‘serve size’ and some are larger. This means some people may need to eat from the Five Food Groups more often than others.

HOW MANY SERVES A DAY?

Few people eat exactly the same way each day and it is common to have a little more on some days than others. However, on average, the total of your portion sizes should end up being similar to the number of serves you need each day.

If you eat portions that are smaller than the ‘serve size’ you will need to eat from the Food Groups more often. If your portion size is larger than the ‘serve size’, then you will need to eat from the Food Groups less often.

*For pregnant women – not drinking alcohol is the safest option.
